

Dear Applicant,

Thank you for taking the time to provide us with the information requested on this application.

Lawn irrigation systems must be underground and totally closed with no faucets or sillcocks that could be in any way connected or re-connected to the property's domestic water line. The City's Construction Standards for installation of the meter setter and backflow prevention devices must be followed.

There is no additional charge for installation of residential lawn meters, however, there is an additional charge of \$6.00 per month (subject to change without notice) to cover the extra billing charges. Consumption measured from this meter will be billed for water only.

Customers requesting any change to the information contained in their domestic service (such as change of ownership or mailing address) must include the irrigation account as well. Any landlord/tenant terms that may apply to the domestic service apply to the irrigation service as well.

Regardless, under all circumstances, the current property owner remains responsible for the payment of any and all municipal utility charges for the property. Until this completed application is returned, no approval for meter installations will be granted.

Rules, rates, and fees are available on our website. If you have any questions please contact a customer service representative by calling 603-225-8693.

Please find the application for residential irrigation service on the page below.

WaterSense® Labeled

# Irrigation Controllers

Residential outdoor water use in the United States accounts for nearly 9 billion gallons of water each day, mainly for landscape irrigation. Experts estimate that as much as 50 percent of this water is wasted due to overwatering caused by inefficiencies in irrigation methods and systems. Irrigation control technologies can significantly reduce overwatering by applying water only when plants need it.

## SMART WATERING

WaterSense labeled irrigation controllers, which act like a thermostat for your sprinkler system by telling it when to turn on and off, use local weather and landscape conditions to tailor watering schedules to actual conditions on the site. Instead of irrigating using a controller with a clock and a preset schedule, WaterSense labeled controllers allow watering schedules to better match plants' water needs. With proper installation, programming, and maintenance, homeowners and businesses can use WaterSense labeled controllers instead of standard clock-timer controllers on their existing systems, and no longer worry about wasted water.

## WATERSENSE SAVINGS

Replacing a standard clock timer with a WaterSense labeled irrigation controller can save an average home nearly 8,800 gallons of water annually. If every home in the United States with an automatic irrigation system installed and properly operated a WaterSense labeled irrigation controller, we could save \$435 million in water costs and 120 billion gallons of water across the country annually from not overwatering lawns and landscapes. That's equal to the annual household water needs of nearly 1.3 million average American homes.

WaterSense labeled irrigation controllers allow watering schedules to better match plants' needs.

## LOOK FOR THE WATERSENSE LABEL!

To earn the WaterSense label, landscape irrigation controllers must be able to adequately meet the watering needs of a landscape without overwatering. As with all other WaterSense labeled products, WaterSense labeled controllers are third-party certified to ensure that they meet the WaterSense criteria for efficiency and performance. For more information or a list of WaterSense labeled products, visit [www.epa.gov/watersense](http://www.epa.gov/watersense).
